The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply							
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).							
Status

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3, 4, 10, and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Kishi et al. (U.S. 3,904,320).

Kishi et al. in Figure 1 teaches a compressor comprising a compressor housing (11', 19) a plurality of cylinder bores (34, 34') made in the compressor housing (19) and spaced from one another in a circumferential direction of the compressor, a plurality of pistons (15, 15') reciprocally movable in the cylinder bores (34, 34') respectively, and a cylinder head (24) opposite to one end of the compressor housing and defining a refrigerant suction (25') chamber and a refrigerant discharge chamber (26') each of which communicates with the cylinder bores (34, 34'). The cylinder head (24) having a space located between the refrigerant suction chamber (26') and the refrigerant discharge chamber (25'), (See Note).

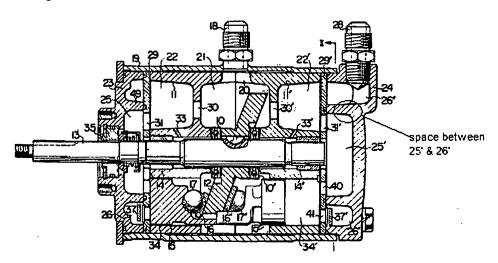

In the refrigerant compressor, the suction chamber (25') is at a radially center area of the cylinder head (24) while the refrigerant annular (see Figure 2) discharge chamber (26') is at a radially outer peripheral area of the cylinder head (24).

The compressor further comprises a valve plate (29') interposed between the compressor housing (11', 19) and the cylinder head (24).

With respect to the refrigerant being carbon dioxide, a recitation with respect to the material intended to be worked upon by a claimed apparatus does not impose any structural limitations upon the claimed apparatus which differentiates it from the prior art apparatus satisfying the structural limitations of the claims, as is the case here.

MPEP section 22.251

(Note: see the dividing wall that spaces chamber (25') from chamber (26') as illustrated in Figure 1 below.

End Notes)

Art Unit: 3746

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 2 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kishi et al., as applied to claim 1, and in further view of Sieberg (U.S. 6,942,472 B2).

Kishi et al. set forth a device as described above, which is substantially analogous to the claimed invention. The Kishi et al. device differs from the claimed invention in that there is no explicit teaching of the space being formed by a groove which opens to the outside of the cylinder head. Sieberg in Figure 1 teaches a piston compressor head pressure relief assembly (120). The head assembly features a suction chamber (146) and a discharge chamber (128). The head assembly (120) features an unloader post (134) and passage (140) for allowing the relief of discharge

717 CONTROL MAINISCL. 1077 21,01

Art Unit: 3746

pressure before compressor operation without the need for separate un-loader valves (see abstract, column 1 lines 33-51, column 4 lines 7-24). Heat-releasing protrusions are formed on an outer surface of the head (Figure 1, 120). A space (shown not enumerated) is provided formed by a groove, which opens to the outside of the cylinder head (120). Therefore it would have been obvious to one of ordinary skill in the art at time the invention was made to modify the Kishi et al. device by, incorporating the head pressure relief assembly, as taught by Sieberg, in order to advantageously relieve discharge pressure before operation for increased efficiency and with reduced valve parts. In this combination it would have been obvious to incorporate all the essential components of the Sieberg head assembly for each cylinder including the heat releasing protrusions, and the grooved space taught by Sieberg.

Allowable Subject Matter

Claims 6-9 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

Applicant's arguments filed 03/21/2006 have been fully considered but they are not persuasive because the term "space" is defined from Dictionary.com as being anything that separates or keeps apart. The dividing wall shown above clearly defines a

Art Unit: 3746

separation between chambers (25') and (26'), and therefore is still being considered a "space".

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Samuel E. Belt whose telephone number is (571) 272-7820. The examiner can normally be reached on M-F, 8 - 4:30EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Timothy Thorpe can be reached on (571) 272-4444. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
